

Conference with reduced carbon footprint

- ***CO2 free conference*** - SCCL aims to ***offset carbon footprint generated by organization of this conference*** - in total around 3 tons of CO2. CO2 emissions data has been collected and processed by our ***Klappir Lithuania***.
- A part of conference income will be used to plant trees, to ***compensate for the CO2 generated*** in collaboration with forest investments company and SCCL Member ***GreenGold***.
- ***GreenGold*** annually plants ***100 ha of forests in Lithuania*** in a sustainable manner, allowing to build up growing forest stock volumes for future generations. The main part of the cut trees are turned into ecological wood products, thus “locking” the accumulated CO2 for the entire life of the wood product.
